

CIS 3100 Intro to C++ Programming
What to Know for Exam #1
Spring 2017

What to Study. All topics up to (but not including) Functions. The exam will be part definitional (questions about terminology) and part programming.

How to prepare. (a) Review the terms on the lecture notes and those on the Terminology sheet on the Handouts page of the course website. (b) The only way to study for a programming exam is to practice writing programs. Do the programs used in the lecture notes, on the Assignments page, in the book, etc.

What to bring. Pen to write with. That's it.

How many questions will there be? I don't know but I can tell you that the exam will take the full class period. Don't be late.

What if I arrive late? No one will be allowed to begin the exam after the first 10 minutes.
